

MICROSOFT BUILD

Microsoft Build //localhost

BUILD //LOCALHOST: CAPE TOWN · 13 JUNE
2026

Ship It!

Build, test & deploy AI-powered apps with GitHub Copilot and
Azure AI Foundry.

Werner Rall
Senior Cloud Solution Architect

Six things, one workflow

Set up VS Code & Copilot

Tuned for maximum developer productivity

Generate tests & coverage

AI-guided xUnit + Coverlet, not an afterthought

Build an AI Agent

Code-first with Azure AI Foundry in ~20 lines

Build with agent mode

A cloud app on Azure Cosmos DB, from natural language

Review PRs with Copilot

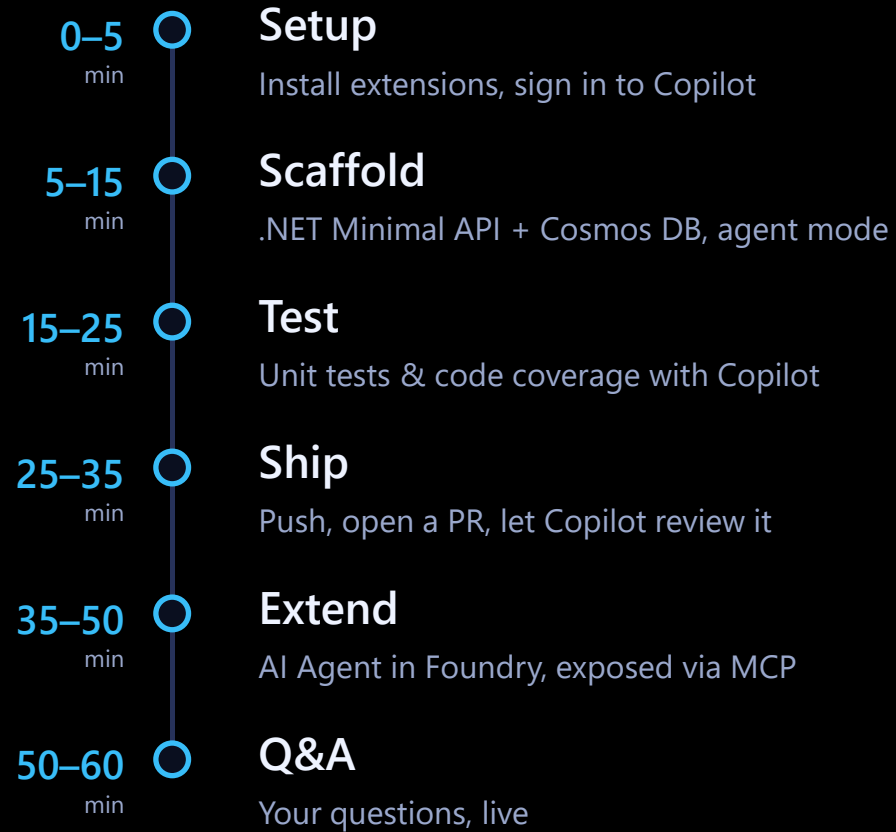

AI summaries, inline suggestions, agent-mode fixes

Ground Copilot in your data

Expose the app as an MCP server it can query live

How the hour unfolds

THE PREMISE

From a blank VS Code window to a
production-ready, AI-powered cloud app -
live, on stage.

No slides after this one. No pre-built answers. Just real, end-to-end developer productivity.

Five things that stick

- 01 Agent mode can scaffold a full cloud app in minutes - with the right prompts.

- 02 Tests and coverage aren't an afterthought; Copilot makes them as easy as the code.

- 03 PRs are better with AI: automatic summaries, inline suggestions, agent-mode fixes.

- 04 Azure AI Foundry lets you build a code-first AI Agent in ~20 lines of .NET.

- 05 MCP closes the loop - your app becomes a live data source Copilot can query.

BUILT WITH

The stack on stage

AI & COPILOT

- ✓ GitHub Copilot
- ✓ Agent mode
- ✓ Copilot Chat & Edits
- ✓ PR summaries

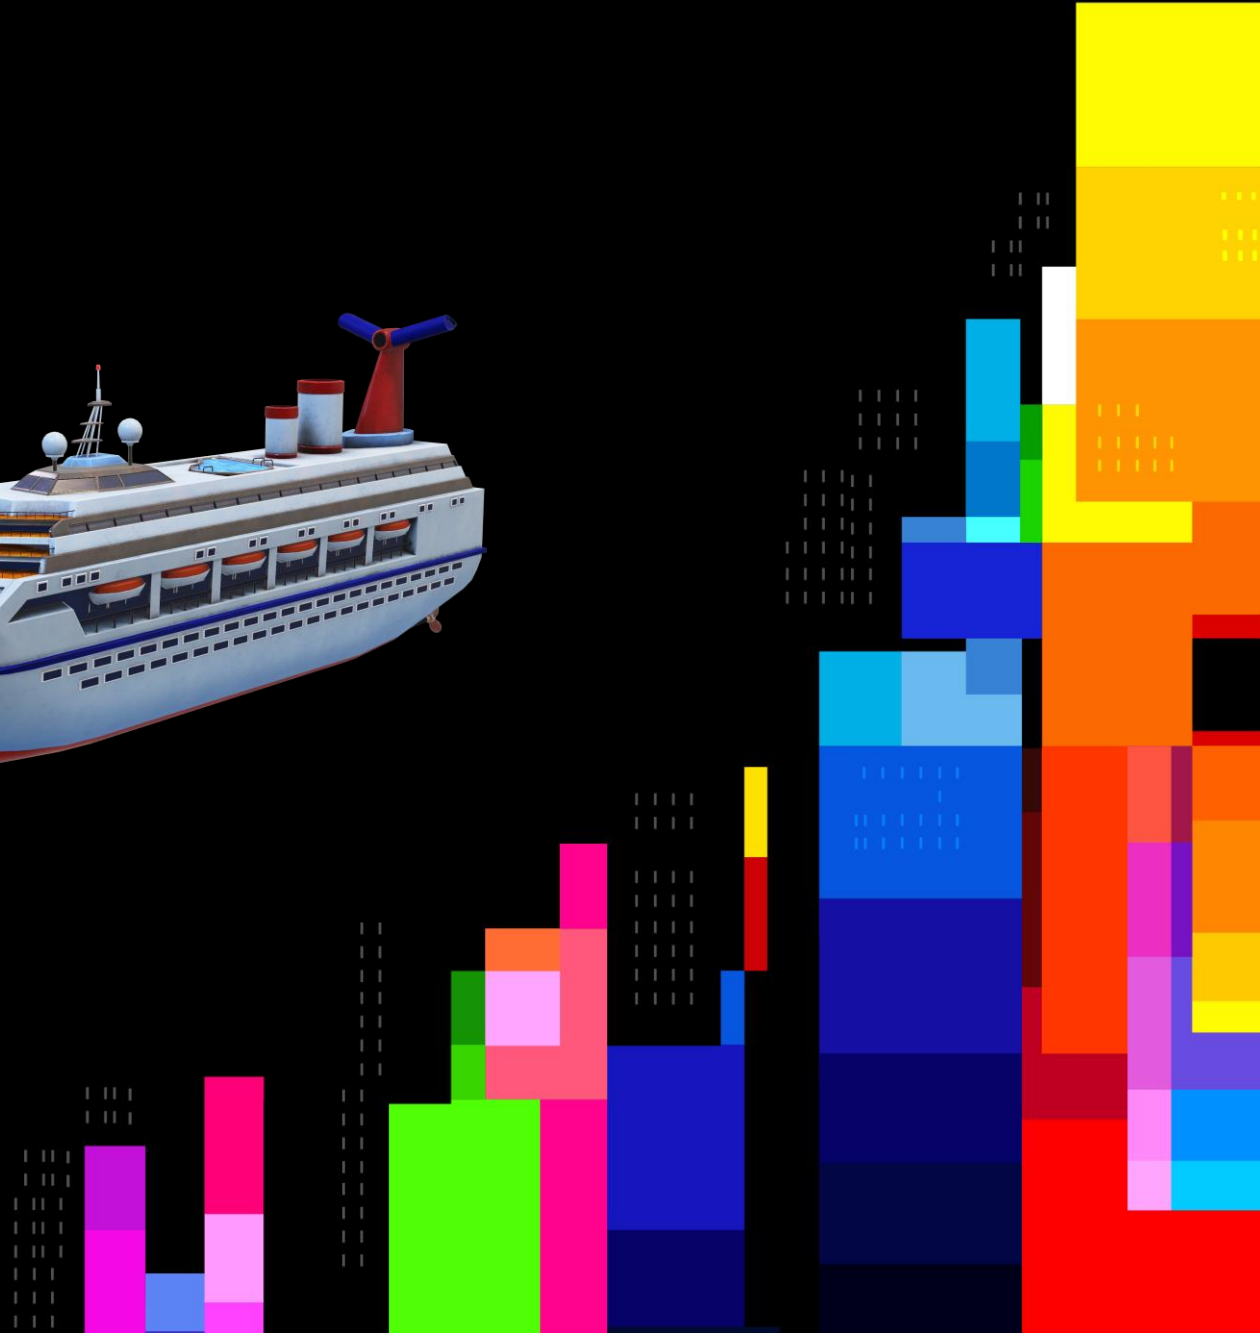

AZURE

- ✓ Azure AI Foundry
- ✓ AI Agent Service
- ✓ Azure Cosmos DB

PLATFORM

- ✓ .NET 10 Minimal API
- ✓ xUnit · Coverlet
- ✓ Model Context Protocol
- ✓ VS Code
